Objective

Detail-oriented QA Engineer committed to improving software quality through thorough testing and analysis. Adaptable and skilled in multiple testing areas, with a strong willingness to learn and grow. Known for clear communication, confidence, and a proactive approach to ensuring reliable and high-quality technology solutions.

Education

College of Computer Science Pune,	2024-2026
Master of Computer Science	Pursuing
Dayanand Science College of Latur	2018-2021
Bachelor of Computer Science	CGPA:8.72

Certification

Naresh IT Technology, Hyderabad,	Jan 2022 – July 2022
Certified Software Testing-Manual, API and Automation Testing(Naresh IT, Hyderabad).	

Skills Summary

Programming Languages: Core Java, Python, SQL,

Automation & Frameworks: Pop-up Handling, Select Class, Action Class, XPath, CSS Selector, WebDriver, TestNG, Automation Framework, Maven, POM.

TestNG Expertise: Annotations, Parameterization, Parallel Execution, Prioritization, Data-Driven Testing, Cross-Browser Testing

Testing Skills & Tools, Platform:

Manual Testing, Automation Testing, Web Application Testing, API Testing (Manual & Automation, Load Testing, Functional Testing, Regression Testing, Smoke Testing, Integration Testing, Exploratory Testing, Selenium, Postman, VSCode, Eclipse, Windows, Linux.

Core Concepts: OOP Concepts, Cross-Browser Testing, CI/CD, Defect Management, Agile Methodology

Soft Skills: Problem Solving, Communication, Leadership, Team Collaboration, Positive Attitude

Other: Test Design, Execution, Defect Management, Agile-Scrum, Documentation, Test Plan, SDLC, Experience

QA Engineer

- Managed QA(Manual) activities for a banking Trade Finance platform, ensuring reliability of modules like Letter of Credit (LC), international remittance, and KYC verification.
- Designed and executed test scenarios and test cases for KYC international transactions and financial workflows.
- Performed API testing using Postman to validate request/response structures, authentication, and data integrity.
- Conducted performance and load testing using JMeter to validate system stability under high transaction volumes.
- Automated critical regression test flows using Selenium WebDriver with TestNG, implementing implicit and explicit waits.
- Enabled parallel test execution with TestNG, reducing regression testing time by 30%.
- Followed Agile methodology and STLC, tracked and managed defects using Jira, and collaborated closely with developers and business analysts.

Selected Project

Project Domain: BFSI (Trade Finance and Internet Banking Application)

- Tested real-time banking transactions and based document verification flows for trade finance operations such as Letter of Credit (LC), Bank Guarantees, and online banking payments.
- Executed comprehensive QA processes including manual functional testing, API validation using Postman, load and stress testing using JMeter, and automation testing using Selenium.
- Validated end-to-end internet banking workflows, including fund transfers, transaction processing, and document verification.

1)Project Name: Trade Finance – Core Banking System Integration

Project Description: This project focused on testing the integration between the Trade Finance (TF) module and the Core Banking System (CBS) within a commercial banking environment. The objective was to ensure that trade finance transactions such as Letter of Credit (LC), Bank Guarantee (BG), and Trade Loans were accurately processed and reflected in the core banking system without data mismatches, financial discrepancies, or compliance issues. The testing process involved validating end-to-end transaction workflows, ensuring proper data synchronization between the Trade Finance system and CBS, and verifying that all financial postings and General Ledger (GL) entries were correctly recorded.

2)Project Name: Internet Banking

Project Description: is a web-based application that allows bank customers to perform financial transactions online without visiting the bank. The application provides secure access for users to manage their accounts, transfer funds, pay bills, view transaction history, and download statements. The system includes authentication and authorization mechanisms to ensure data security and privacy. The application also supports features such as fund transfer (NEFT/RTGS/IMPS), beneficiary management, account balance enquiry, mini statement, bill payments, and profile management.

Awards & Achievements

- Winners of the University Level Cricket Tournament
- State Level Certificate in C Programming.
